Intel Core i5-7200U processor 2.50 GHz; 16 GB DDR3 RAM, 512 GB SSD, 12.5 cm screen, WiFi IEEE 802.11 b/g/n, Bluetooth, USB3.0 port. Canon Pixma Pro9000 Driver Download for Windows and Mac Download your Canon Pixma Pro9000 driver. Q: Why does "kubuntu-desktop" not show up in my "sudo apt-get autoremove"? When I do sudo apt-get autoremove, I'm expecting to see: The following packages will be REMOVED: kubuntu-desktop 0 upgraded, 0 newly installed, 1 to remove and 0 not upgraded. However, I only get: adwaita-icn-theme 1 to remove and 0 not upgraded. Why doesn't it show up in my list? A: As I remember from previous distros, there was something like meta package that includes kubuntu-desktop. So if you want to remove it together with kubuntu-desktop, then you can type following: sudo apt-get purge kubuntu-desktop Some things, like kubuntu-desktop and kubuntu-plasma-desktop are meta-packages that just provide data to allow the system to be rendered properly, rather than actually installed. They are very small and don't add much to the installed system. Thus, the size of the removed package isn't displayed. If you have both Kubuntu and Xubuntu installed (which I assume by your question) and you just want to remove one of them, you can remove the package, but not the meta-packages: sudo apt-get remove kubuntu-plasma-desktop This would remove the "metapackage" of Kubuntu, but would leave both Kubuntu and Xubuntu installed. Q: Solve $y' = (y-1)(y^3-y)$ This is a very simple equation which I've been searching for all over the internet to solve but I can't find an answer. 82157476af
